

RSD and Blindness 2010

18-year-old college student

My daughter was disabled after an injury playing soccer. She soon developed RSD in one leg and ankle. Later the RSD became so painful she was given spinal pain control and many different drugs, nothing would control the pain (typical of RSD) Rapidly it spread to her other leg and ankle and quickly she was confined to a wheelchair racked in pain.

Our worst nightmare was the day she went totally blind as the RSD rose up from her lower body to her eyes. At first she could see only white then it became black. She had to learn to read Braille. It was an unbelievable year as we watched our beautiful daughter unable to walk and now without sight.

We began to search the Internet for something that may at least help with the pain of RSD. We began with 40 Hyperbaric Oxygen treatments and soon my daughter went from a wheelchair to a walker to a cane and then walking again with out PAIN!

We prayed for God to please restore her eyesight. We started another group of 20 HBOT treatments and one morning our daughter woke up and was able to see the outline of her bedroom furniture! Slowly during the treatments her eyesight was fully restored! She was able to return to college and both friends and teachers were shocked to see her not only walk into class, but now her eyesight was restored!

Both her mother and I want to thank Rapid Recovery Hyperbarics for providing treatments and excellent service. Susan was so kind and often would pray with our family. We all cried the day she was able to see the chamber and walk into the clinic pain free and with full eyesight.

Her physicians were speechless as they thought she would have a lifetime of pain and blindness. HBOT has completely changed our life and restored our family. We thank God he provided this wonderful treatment and Rapid Recovery Hyperbarics.

Sincerely,

Mr. and Mrs. XXXX
